Editorial - welcome to Volume 2	8	Choosing an optimum thickness of insulation	76
Forward by the principal author	10	Conservatories and their effect on heat losses from our buildings.....	82
1. Site and climate		4. Infiltration & ventilation	
Introduction.....	12	Introduction.....	100
Climate and energy.....	12	Infiltration	101
UK temperature profile.....	14	Draught proofing and airtightness.....	102
Solar access.....	14	Turning infiltration into managed ventilation	105
Wind.....	18	User friendly methods to retain heat.....	106
Driving rain	21	Ventilation	108
Siting buildings to suit infrastructures.....	22	Mechanical ventilation.....	109
2. Form and function		Heat recovery systems.....	111
Introduction.....	24	Natural ventilation	116
Steady state heat loss rate.....	24	Modelling airflow and ventilation.....	120
Example calculations.....	25	5. Energy and renewables	
The effect of building form (surface area) on fabric heat loss.....	26	Introduction.....	122
Taking advantage of natural energy.....	28	Forms of energy.....	122
Designing floor layouts using the LT method	30	Measuring energy.....	122
The effect of volume on ventilation heat loss	33	The problems of fossil fuels.....	123
Planning the layout to save energy.....	35	Measuring pollutant gases.....	125
Grouping of buildings	37	Reducing fuel consumption.....	126
3. Fabric and elements		Carbon offsetting	129
Introduction.....	42	Renewable energy.....	130
Complying with Part L of the Building Regulations.....	42	What can renewables really contribute?	130
Understanding the thermal properties of building materials	43	The 'Merton' rule for 10% renewables.....	131
Introducing 'super insulation'	48	Wind power.....	133
Individual building elements	52	Large scale wind farms.....	133
Windows and glazing	52	Small wind turbines	134
Other transparent materials.....	56	Potential outputs from small diameter wind turbines	136
Glazing systems and comfort.....	57	Important considerations before siting wind turbines near or on buildings.....	136
Doors.....	64	Hydro power	139
Floors	64	DC and AC currents.....	140
Walls.....	66	Exporting excess electricity	140
Modelling to assess the benefits of thermal mass in a range of wall types	69	Other forms of water power	142
		Tidal barrages	142
